EXPERIENCE

Uber

Seattle, WA

Frontend Software Engineer (Unified Account Management Team)

September 2023 - July 2024

Javascript Typescript React GraphQL gRPC

- Worked on migrating Uber's previously fragmented account management over to a new unified service, providing a consistent user experience across Uber's 5+ apps and mobile/desktop web clients.
 - This includes revamping existing flows such as email and password updates, improving security features like 2FA (contributed to frontend development), and implementing new features like 3P data access management (co-authored design doc and sole frontend developer)
- Improved frontend reliability by advocating for and leading biweekly reliability meetings, writing the oncall runbook to provide a detailed plan of action to follow when things go wrong, and enhancing service alerting.

Backend Software Engineer (Product Equity Team)

July 2022 - September 2023

Go Thrift gRPC

- Architected and built Uber's automated name validation service that augments the existing flow of updating earner names on the platform in order to reduce the volume of name change tickets sent for manual review. This has resulted in an estimated annual savings of \$500K on customer support costs in just the US alone.
- Implemented user pronoun designation feature and worked with teams to surface it across the platform.

Software Engineer Intern (Cadence Team)

May 2021 - August 2021

Go Cadence Cassandra

- Developed an alternative config system for open source Cadence customers to use that resolves many of the pain points with the current file based system such as file synchronization between hosts of a Cadence cluster.

Amazon Web Services

Seattle, WA (Remote)

Software Development Engineer Intern (CloudFormation Team)

June 2020 - August 2020

Java GraphQL AWS (incl. AppSync, Lambda, DynamoDB, DocumentDB)

- Developed a query engine for customers to build complex queries using GraphQL against their CloudFormation data in order to reduce the number of API calls and client-side computation currently required for queries.

EDUCATION

Carnegie Mellon University

Pittsburgh, PA

Bachelor of Science in Computer Science | Minor in Robotics

September 2018 - May 2022

Relevant Courses: Robot Kinematics and Dynamics, Introduction to Feedback Control Systems, Distributed Systems, Principles of Software Construction, Algorithm Design and Analysis, and Software Foundations of Security and Privacy

SKILLS

Programming Languages Python C/C++ Javascript Typescript Go Java

Frameworks and Technologies Git ROS2 LeRobot React gRPC GraphQL SQL Cadence AWS

Other CAD 3D Printing Arduino Raspberry Pi Basic PCB Design Machine Shop Experience

PROJECTS

Over the years, I've worked on a bunch of personal projects including a full-sized humanoid(-ish) robot running ROS, an LED matrix dashboard (with calendar, phone notifications, todo lists, spotify integration), and more.
